PROFESSIONAL SUMMARY

Backend-focused Computer Science student with hands-on experience designing and deploying full-stack web applications. Currently building MightyInvest, a real-time stock market analytics SaaS platform, applying API-First architecture, caching strategies, and containerized deployment. Strong interest in backend engineering, DevOps practices, and distributed systems.

TECHNICAL SKILLS

Backend: Laravel, Node.js, Express.js, REST API Design

Frontend: Angular 17+, RxJS, HTML5, CSS3

Database & Cache: PostgreSQL, MySQL, MongoDB, Redis

DevOps & Infra: Docker, Docker Compose, Nginx, Linux, AWS EC2

EXPERIENCE

MightyInvest | Full-Stack Developer — Personal Project 2025 – Present

Stack: Laravel, Angular, PostgreSQL, Redis, Docker, Nginx

Repo: github.com/corvoattanoo/mightyinvest

- Architected a real-time stock market SaaS platform using an API-First approach, reducing database load by ~70% by streaming live data directly from external financial APIs instead of storing it locally.
- Designed a configurable candlestick charting engine (1H, 1D, 1W, 1M) with a backend data normalization layer that transforms third-party API responses into a consistent format for frontend consumption.
- Built a Redis-based caching layer for market status and live stock quotes, optimizing API rate limit usage and reducing average response latency.
- Dockerized the full stack into a single-command setup, eliminating environment drift between development and production.
- Implemented a Controller-Service architecture separating business logic from API communication, following SOLID design principles.
- Currently expanding the platform with portfolio management, dynamic watchlists, and real-time market status tracking via RxJS Observable streams.

Alzam Digital | Web Administrator Intern 2025 – Present

Stack: Linux, Moodle, WordPress, MySQL

- Maintained a Learning Management System integrating Moodle and WordPress for active production use.
- Performed Linux server configuration, database management, and system performance monitoring.
- Diagnosed and resolved web platform issues in a live environment, gaining hands-on production experience.

ADDITIONAL PROJECTS

CampSphere — Full-Stack Web Application

Stack: Node.js, Express, MongoDB, Mapbox, Cloudinary, Passport.js

Repo: github.com/corvoattanoo/CampApp

- Built a campground listing platform with full CRUD functionality, interactive maps via Mapbox, and secure image storage via Cloudinary.
- Implemented session-based authentication with Passport.js and request validation using Joi middleware.

Todo API — Backend Deployment

Stack: Laravel, MySQL, Nginx, AWS EC2, Docker Compose

- Developed a RESTful task management API and deployed it on an AWS EC2 Linux VPS with Nginx as a reverse proxy.
- Debugged real production issues including server misconfiguration and database connectivity, gaining end-to-end deployment experience.

EDUCATION

Akademia Ekonomiczno-Humanistyczna w Warszawie | BSc Computer Science – Web Development 2022 – 2026

LANGUAGES & WORK AUTHORIZATION

English: Professional / Fluent

Turkish: Native
